DETAILED ACTION

Specification

1. The title of the invention is too generic to be descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Information Disclosure Statement

2. The information disclosure statement filed 19 December 2005 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. The Japanese language search report is NOT considered to be an explanation. It has been placed in the application file, but some of the information referred to therein has not been considered.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kimura (US # 5,445,261) in view of Sahlberg (US # 5,467,859). Kimura disclose transport apparatus including a trough (17), a first protruding part (22a), a reciprocating mechanism (42), and a depressed part (20a). Kimura disclose the claimed invention except for the limitation that the vibration is asymmetric. Sahlberg teach that it is known to vibrate a conveyor such that it accelerates faster in one direction than the other in order to insure that the material moves in one direction only (Col. 2, lines 15-30). It would have been obvious to the ordinary practioner to use an asymmetric drive means, as suggested by Sahlberg, for the vibrational conveyor of Kimura for efficiency.

The limitations in some of the claims that mention various alternative locations for the protruding and depressed parts (on the side, facing certain directions, etc.) do not add any patentable weight since it would have been obvious to simply relocate parts. See *In re Japikse*, 181 F.2d 1019, 86 USPQ 70 (CCPA 1950); and, *MPEP* § 2144.04.
